Charles D. Hines, District 5

Thomas A. Harmer, County Administrator

Lori White, Superintendent of Schools

## For more information visit:

Sarasota County Government  
[www.scgov.net](http://www.scgov.net)

## Dear Neighbor:

It gives me great pleasure to present Sarasota County's "Branch Out – Plant a Tree" calendar, with artwork by Sarasota County elementary school students.

The "Branch Out – Plant a Tree" concept is all about highlighting the value of trees in our landscape as Low Impact Development tools that capture rainfall and reduce polluted run-off into our waterways and bays. Trees also do a great job at controlling erosion, soaking up nutrients and shading our homes and businesses. By reducing and cleaning runoff, we are protecting and preserving the waters we all enjoy.

In this calendar, you will learn how planting and maintaining our existing trees and forested areas, can help keep Sarasota's waterways healthy and beautiful. As our county grows and develops, the need to balance the preservation of our natural resources also increases. One of the easiest ways to do your part is to branch out and plant a tree in your own yard.

A tree is nature's gift that keeps on giving. Plant one today!

Sincerely,

Carolyn J. Mason, Chair (2015)

SARASOTA COUNTY COMMISSION

## You can make a difference in keeping our environment clean and healthy. Branch out and plant a tree!

In this calendar we present 13 images created by Sarasota County elementary school students. Hundreds of talented students entered the contest, making it difficult to choose only 13 winning entries. These drawings show us how trees help keep our waterways clean and the more trees we have, the better our environment becomes.

You can use trees to keep our waterways healthy and clean:

- Create a beautiful rain garden in your yard with a tree.
- Plant trees to catch the rain and help it soak into the ground.
- Use trees to reduce the need for grass, fertilizer and mowing.
- Plant shade trees near your home to keep your house cool.
- Volunteer to help plant trees in parks and open areas.

When planting trees use materials that let rain soak into the ground. By doing this you will help our bays and waterways stay healthy and pollution-free.

Did you know that after raindrops hit the ground they wash away gross stuff like fertilizer, dog poop and trash? Raindrops eventually become what's called "stormwater run-off" and that water ends up in our creeks, bays and Gulf waters. Trees help collect rainwater and reduce rainwater run-off.

We asked students to use their imagination and talent to illustrate how trees help keep our waterways beautiful. Then our judging panel rated the artwork on the best expression of theme, poster design, creativity and artistic skill. The winning student's artwork will be displayed online during the month they represent on the Neighborhood Environmental Stewardship Team (NEST) page at [www.scgov.net](http://www.scgov.net), keyword: NEST. As you'll see in the following pages, local students clearly understand the roles that trees play in supporting healthy waterways and that our actions can make a difference in Sarasota County.

## Tree Rainfall Interception

When rain falls something amazing happens. Tree leaves **intercept** and host thousands of raindrops. Some of the raindrops **evaporate**, and some fall off the leaves directly into the ground called **throughfall**. Others travel down the tree trunk by what is called **stem flow** and make their journey into the soil around the tree. After the rain water hits the ground, three things happen as the roots help it infiltrate into the Earth. The first is **deep seepage** which recharges the underground aquifer. Next is **baseflow**, which moves laterally just below the surface and flows into ponds, lakes and rivers. Then when the soil is saturated, rainwater can't infiltrate and becomes **runoff**, which flows across the land and into our bays, picking up pollutants on its way. Finally, the rainwater that remains is absorbed by the **root uptake** and moves back up into the tree to feed branches and leaves. As the tree breathes and grows, it holds pollutants and releases moisture and oxygen called **transpiration**, through its leaf pores and sends it back into the atmosphere. Once enough moisture is released, it forms clouds and the rain cycle begins again.

Trees truly are one of nature's best tools for keeping the Earth clean and healthy.
