The references listed below result from a decade-long Urban Boating Bay Water Management Research and Extension Program, sponsored by the National Oceanographic and Atmospheric Administration (NOAA), through Florida Sea Grant College Program, Coastal Services Center and The Marine Charting Division, and by the West Coast Inland Navigation District. Designed to help Florida boaters, residents, communities, and businesses achieve sustainable, self-regulated use of coastal waters, the program’s goals are eliminating the need for costly and onerous regulation of boating citizens, enhancing the boating experience, and reversing the decline in quality of coastal waters. The program focuses on anchorage and waterway management, operating under the aegis of formalized agreements with the Florida Department of Environmental Protection.

Detailed resource inventories, scientific and technical investigations, and extension education publications (maps and guide materials) are some of the results of this ongoing effort. Copies of these materials can be examined at or obtained from the agencies referred to by number in () below.

Dredger at Work on Canal in The Everglades (accompanied by Laborers House Boat), Florida.
Alva: Have you seen this picture? It's a picture of the house where I grew up. I once stayed in the Alva Hotel while they did work on the house. It's a little bit of a find for me. Can you spell the name of the house? I think we might have a clue. We lived here once, you know. My grandparents lived here.
